Wireframe Index

All screens are presented as high-fidelity low-color wireframes representing real layout, component hierarchy, and interaction flow. Covers 16 functional domains across all roles.

01	Login & Authentication Role detection, OTP, session	02	RBAC Permission Matrix All roles & access grid
03	Super Admin Dashboard Cross-community analytics	04	Community Admin Dashboard Community KPIs & management
05	Community & Property Setup Tower, Floor, Unit hierarchy	06	Resident Management Owners, tenants, family
07	Visitor Management Lifecycle End-to-end visitor flow	08	Security Gate Dashboard Live guard operations
09	Domestic Staff Management Staff assignments & attendance	10	Delivery Management Configurable delivery protocols
11	Vehicle & Parking Module Slots, violations, tracking	12	Maintenance & Billing Invoices, ledgers, receipts
13	Complaint & Service Desk SLA-driven ticketing	14	Amenity Booking Engine Calendar, slots, conflict check
15	Community Communications Notices, polls, broadcasts	16	Emergency & Incident Mgmt Panic alerts, incident log
17	Resident Dashboard Dues, visitors, tickets	18	Notification Engine Push, SMS, audit logs
19	Mobile App Screens Guard & Resident mobile UX		

Wireframe Convention: All screens use a consistent monochrome-blue palette. Dashed borders indicate interactive/clickable zones. Gray fill indicates skeleton/data placeholders. Blue highlights indicate active state.

Role Auto-Detection

Upon successful login, the system detects the user's assigned role and routes to the appropriate dashboard.

ROLE	ROUTE	SESSION
Super Admin	/admin/global	Global
Comm. Admin	/admin/community	Community
Security Guard	/gate/live	Gate
Owner/Tenant	/resident/home	Unit

1

RBAC Guard: All routes are protected. Accessing an unauthorized URL redirects to the correct dashboard for the logged-in role.

2

Rate Limiting: Login endpoint enforces rate limiting — max 5 failed attempts triggers temporary lockout. Argon2 password hashing required.

3

Session Management: Secure HttpOnly session cookies; CSRF token required on all state-changing requests.

Save Permissions

- 1

RBAC Enforcement: Permissions are enforced at BOTH the API middleware layer (backend) and component render layer (frontend). URL manipulation must return HTTP 403 for unauthorized access — not just a redirect.
- 2

Multi-Community Isolation: Community-scoped roles (Admin, Guard, Resident) are strictly isolated by community_id foreign key — no cross-community data leakage permitted.

Immutable Audit Logs: Audit records capture: user_id, action, module, previous_value, new_value, timestamp, IP session. Logs are append-only — no deletion or modification permitted, even by Super Admin.

2

Integration-Ready Notifications: SMS and WhatsApp channels operate in mock mode for the sample environment. Architecture is ready for live API integration (Twilio, MSG91, WABA).

Mobile App Screens

Security Guard · Resident — Key Mobile Flows

Mobile PWA

Key mobile screens for the two most time-critical roles — Security Guard (gate operations) and Resident (visitor approvals).

- 1 Responsive Design:** All web screens must be responsive and functional on mobile browsers (min 375px width). Native-feeling interactions via PWA patterns — no separate app build required.
- 2 Guard Panic Alert:** Single-tap large panic button on the guard mobile screen — critical for zero-confusion emergency situations. Requires immediate visual confirmation on press.
- 3 Visitor Approval Timeout:** If resident does not respond within 2 minutes, a secondary notification fires. After 5 minutes with no response, the guard receives a timeout status and must contact resident directly.
